

Supplementary file 1

Table S1. Mixed effect regression model formulas to test the association between family income and perceived discrimination among American children

Model 1

Perceived discrimination = Household Income + Race + Sex + Married Family + Age + Parental Education + Hispanic

Model 2

Perceived discrimination = Parental Education + Household Income + Race + Sex + Married Family + Age + Parental Education + Hispanic + Household Income x Race

All Models: Random: ~(Site / Family)

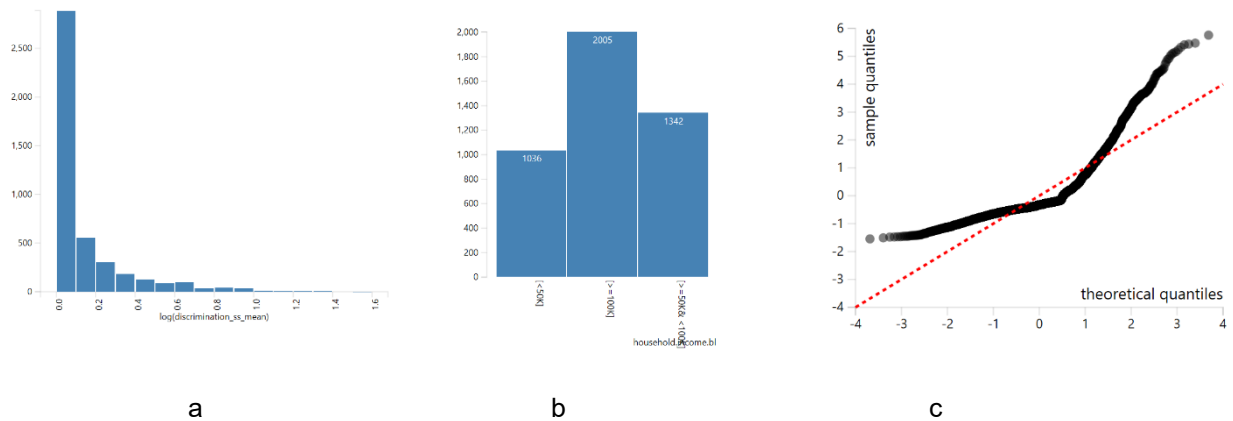

Figure S1. Testing assumptions of our models. a) Histogram showing normal distribution of our outcome, b) residuals of our model, and c) association between observed and theoretical quantiles of our model
